MICRO-X5 SANITISER

HIGH PERFORMANCE DISINFECTANT & SANITISER DESIGNED FOR FLOOD TREATMENT

INVOLVED IN FLOOD DAMAGE REMEDIAL OR REPAIR WORKS ?

Apart from the obvious remedial work required to a property that has been subjected to flood water, a very important treatment should never be overlooked:

Disinfection Cleaning & Sanitisation

Flood water carries with it many types of bacteria, virus etc. These can be carried on water from sewers, fields and the general damage caused by flooding. Once the flood water has subsided these bacteria and virus remain within the plaster, brickwork, timber joists/floorboards, fixtures and fittings. It is vital that these areas should be properly disinfected and sanitised prior to re-instatement works being carried out and re-occupation of the property.

PRODUCT DESCRIPTION

Micro-X5 Sanitiser is an extremely concentrated sanitiser and disinfectant containing a highly potent biocide system making it very effective for use in the sanitisation of properties subjected to flood damage. It should be used as a sanitiser prior to initial cleaning out of the property and also used as a part of the subsequent remedial works.

DISINFECTION CLEANING & SANITISING

Flood water carries with it many types of bacteria, virus etc. Once the flood water has subsided these bacteria and virus remain within the remaining plaster, household goods, brickwork, timber joists/floorboards, fixtures and fittings. All these areas require to be properly disinfected and sanitised prior to removal and re-instatement works being carried out and ultimately re-occupation of the property.

For safety reasons it is important to sanitize household goods before removal.

Micro-X5 Sanitiser is a disinfectant and sanitiser specifically formulated by CONSTRUCTION CHEMICALS for the control of a broad range of gram+ve and gram. ve bacteria including hepatitis B, salmonella, campylobacter, listeria, MRSA and many others. When used as part of initial remedial works after flood damage, the product will sanitise and disinfect the entire area that has been susceptible to bacterial contamination.

APPLICATION

- 1 The product is ready to use in 25l containers or 30g concentrate soluble sachets
- 2 Initially spray all contaminated areas prior to handling
- 3 Spray timbers that are to remain in situ
- 4 Spray brickwork prior to plaster reinstatement
- 5 Spray sub floor areas and soil

FORMULATION

Surfactant Blend	<10%
Quart. Ammonium Compound	< 5%

COVERAGE

As required

PACKAGING

25Lt plastic containers or 30gm water soluble sachets diluting to make 25 litres (20 per box)

Store at ambient temperatures and protect from frost. Shelf life is 2 years

Refer to material safety data sheet and product label for full Health and Safety data
