

# WEED KILLER

## Description

A one-pack ready to use chemical treatment that is designed to remove surface weeds from the joints in concrete paving

Weed – Stopper will kill all broadleaf plants, grasses & perennial weeds. When used as part of the Swiss - Seal Renovation System, it kills all surface growths and protects new in fill sand and the sub surface against further infestation for up to two growing seasons.

## Suitable Substrate

**WEED KILLER** is suitable for a wide variety of concrete and other paving surfaces. The product is particularly suited to block paving, concrete/stone patio flags, tarmac & loose laid aggregate surfaces.

To test the suitability of **WEED KILLER** we recommend a small trial application is carried out or contact the technical department of Integral Chemicals Limited, who will be pleased to give advice.

## Application

The surface to be treated should be lightly washed down before applying **WEED KILLER**

Apply using a plastic watering can fitted with a fine plastic rose or by light pressure spray, take care to avoid the over spray damaging surrounding property and vegetation.
